Serial No.: 09/900,267

Attorney Docket No.: 01P12193US

## IN THE CLAIMS:

This listing of the claims will replace all prior versions and listings of the claims in the application:

1. (Currently Amended) A telecommunications system, comprising: a local area network;

one or more telecommunications devices coupled to said local area network;

- a switching unit coupled to said local area network, said switching unit adapted to associate a plurality of numbers with a user, record a time and associated number at which said user has been reached, and perform a closest neighbor comparison of records of previous calls to determine where to connect a current call.
- (Original) A telecommunications system in accordance with claim 1, said 2. switching unit further adapted to switch calls to said user at particular locations at programmed times.
- (Original) A telecommunications system in accordance with claim 2, said 3. switching unit comprising an H.323 gatekeeper.
  - (Original) A telecommunications gatekeeper, comprising: 4.
- a control processor adapted to process incoming and outgoing calls, wherein users have one or more numbers associated with them;
- a record unit adapted to store in a memory a call history associated with particular users; and
- a compare unit adapted to perform a closest neighbor comparison of said call history to determine at which of said one or more numbers to connect the call.
  - (Original) A telecommunications gatekeeper in accordance with claim 4, 5.

CH

Attorney Docket No.: 01P12193US Serial No.: 09/900,267

said control unit programmable to switch calls to said users at particular numbers at particular times.

- (Original) A telecommunications gatekeeper in accordance with claim 5, 6. said compare unit adapted to perform said closest neighbor comparison if a call is not connected to a programmed number at the programmed time.
- (Original) A telecommunications gatekeeper in accordance with claim 4, 7. wherein said call history is updated after every call.
- (Original) A telecommunications gatekeeper in accordance with claim 4, 8. wherein said call history is cleared after a predetermined period.
  - (Original) A method, comprising: 9. maintaining a call history of calls to one or more numbers of a particular user; receiving a new call;

performing a closest neighbor comparison on said call history to determine at which of said numbers to switch said new call;

connecting said new call; and updating said call history.

- (Original) A method in accordance with claim 9, further comprising first 10. attempting to switch a call to a user-programmed time associated call location.
- (Original) A method in accordance with claim 10, further comprising 11. clearing said call history after a predetermined period has elapsed.
  - 12. (Original) A method, comprising:

Serial No.: 09/900,267

Attorney Docket No.: 01P12193US

providing a control processor adapted to process incoming and outgoing calls, wherein users have one or more numbers associated with them;

providing a record unit adapted to store in a memory a call history associated with particular users; and

providing a compare unit adapted to perform a closest neighbor comparison of said call history to determine at which of said one or more numbers to connect the call.

(Original) A method in accordance with claim 12, said control unit 13. programmable to switch calls to said users at particular numbers at particular times.

CH

- (Original) A method in accordance with claim 13, said compare unit 14. adapted to perform said closest neighbor comparison if a call is not connected to a programmed number at the programmed time.
- (Original) A method in accordance with claim 14, wherein said call history 15. is updated after every call.
- (Original) A method in accordance with claim 14, wherein said call history 16. is cleared after a predetermined period.
